INFORMATION TECHNOLOGY PROGRAMME

SOFT708 MOBILE APPLICATIONS DEVELOPMENT

Assignment 2 (Group): Trimester 1, 2026

Due: 4:00 pm, Friday 24th April 2026

Deliverables: Source code, APK file, database script, web API script, and Application demo recording.

Where: Moodle Dropbox

This assignment is worth 40% of the total marks in the course and will cover the following learning outcomes as listed in the Course Outline:

2. Develop and implement Android applications User Interface (UI) by using Android controls.
3. Develop Android applications that include commonly used mobile application features.
4. Develop Android applications that can access data from remote as well as local data sources.
5. Develop workplace soft skills including working in groups, writing formal reports, carrying out individual research and/or delivering oral presentations.

General Instructions:

- Include a cover page that includes your name, student ID, course code and title, assignment title
- All sources should be acknowledged in the main body of the assignment and in a reference list at the end of the assignment. You are also required to reference any tools/software/applications used. Refer to the 7th edition of the APA referencing style guide. Examples of how to present references can be found here: https://apastyle.apa.org/style-grammar-guidelines/references/examples.
- Your assignment should be your own work to demonstrate your thinking. Any direct quotes from any source should be placed in "quotation marks".
- Upon submission, your assignment will be checked for copied materials as well as the use of AI (artificial intelligence), with penalties to be applied where appropriate and if not referenced.
- You may resubmit draft versions of your assignment **until the due date**. After the due date, the latest version will be accepted as the final version. Note that similarity reports may take 24 hours to generate.
- Resources to assist with writing skills can be found at https://moodle.ais.ac.nz/course/view.php?id=4#section-4
- Late submissions will be penalised by 5% of the available marks from the marks awarded per working day (24 hours) for up to four days and receive a zero mark after four days. (96 hours).
- Mark Distribution is as follows:

Summary of Marking Criteria

Tasks	Description	Max Marks	Obtained Marks
Task 1	Develop and Implement Android Application User Interface (UI)	**31**	
Task 2	Android Application Feature and Functional Requirements	**16**	
Task 3	Database operations	**38**	
Task 4	Application Demo	**15**	
	Total Marks	**100**	

This assignment is marked out of 100 marks; and is worth 40% of the total course marks

Marking Rubric for this Group Assignment provided in Appendix E

Scenario: You need to work in a group for this assignment (maximum of three students in a group). You are required to develop an Android Mobile Application of your choice that access data from local and remote data sources. Make sure that your choice of Application should have 3-tiers (i.e., presentation tier - user interface, middle tier – business logic/data access tier, and backend - Database). For the choice of mobile application, you can either develop entirely new

android mobile applications from scratch or enhance the functionality of the Mobile Application you have developed for Assignment 1.

Note:

1. **Your lecturer is a client for this assignment. You should show your app design like a prototype, to your lecturer for feedback and confirmation before implementing it. You may also discuss with your lecturer for any clarification regarding the application's scope.**
2. **Marks may be deducted if any requirement is incomplete or not applied appropriately.**
3. **You have been assigned to a group of 3 members by your lecturer where you need to work together to produce the required mobile app. Task 1 to 3 will be assessed as group effort while Task 4 will be assessed individually although you will be conducted the presentation in a group. Sign the team agreement document in Appendix A.**
4. **Look for the group you belong and start communicating with the team members to discuss the mobile app requirement to be developed.**
5. **You must inform your lecturer when you formed a group, and your lecturer will assign a group if you are unable to form one. Task 1, 2 and 3 will be assessed as group effort while Task 4 will be assessed individually although you will be conducted the presentation in a group. Group members must sign the team agreement document in Appendix A and submit to your lecturer. Make sure to discuss and confirm with your lecturer when assigning role to each member of your group covers the learning outcome #2, #3, #4, #5 as stated above**. For the group's effort on Task 1, 2 & 3, each member will be asked a few questions through an interview like session (viva assessment – Appendix D) to determine the portion of the group's awarded marks the member should earn; each of the viva questions is based on the learning outcome 2, 3 and 4. In addition, each member needs to evaluate each member in the group one day before the due date using the peer-evaluation form in Appendix C and submit to Moodle.

TASK 1 – DEVELOP AND IMPLEMENT ANDROID APPLICATION USER INTERFACE (UI) (31 Marks)

You will create an Android Application User Interface (Presentation tier) using a declarative and programmatic approach that will provide the needed functionality for the user to do their work. The presentation tier makes requests to the middle tier. The middle tier processes the requests and returns a response back to the presentation tier. The Android User Interface presentation-tier includes the Android Widgets. As software development's good practice, make sure to produce these designs and submit to Moodle link called "A2 designs" the following: activity diagram, use-case diagram, sitemap, user interface designs, class diagram and database design.

Note: if you are enhancing the assignment 1, following UI requirement for assignment 2 is either additional or different from assignment 1.

A) User Interface, and Exceptional Handling requirements (25 marks)

The exact appearance and functionality of your UI are up to you. The requirements are documented below.

1) UI is customised for different Android screen sizes. (An android application may be designed in a way to run on screen size 3.7" as well as 10.1"). **(10 marks)**

2) Ensure user-friendly UI design **(10 marks)**

3) User interface is designed professionally. **(5 marks)**
Note: For designing a professional user interface, you may use a navigation drawer, action bar, dynamic views, scrollbars etc.

Note:

- **A design that is genuinely confusing or hard to use (at the lecturer's discretion) will not receive full credit.**
- **Some IDEs, such as NetBeans, will let you specify the appearance and behaviour of your UI and automatically generate the code for you. You may not use these tools; you must write your UI from scratch in Android Developer Tools (Kotlin, XML).**

B) Exceptional handling: (6 marks)

4) Use exception handling (use extensive exception handling throughout the application). **(6 marks)**

TASK 2 – ANDROID APPLICATION FEATURE AND FUNCTIONAL REQUIREMENTS (16 MARKS)

A) Feature requirements: (8 marks)

5) Include any two of the following features: Rich Site Summary (RSS), Google map, GPS, or Social Networks. Choose any two that were not inherited from previous mobile app or make significant improvement.

B) Other functional requirements: (8 marks)

6) Include any two of the following functionalities different from assignment 1: splash page, dial phone number, send email or text, browsing website, play video, or Google Calendar. Choose any two that were not inherited from previous mobile app or make significant improvement

TASK 3 – DATA BASE OPERATIONS (38 MARKS)

7) In this task, you will implement SQL and NoSQL database for your Android Mobile Application using 3-Tier (i.e, User Interface, Middle Tier - Business / Data Access Layer, and Back-end - SQLite Database, NoSQL such as Firebase or MongoDB).

(8 marks)

8) Fetch the data from SQL and NoSQL using web services and display appropriately in the mobile application. **[12 marks]**

9) Allow user to search the SQL or NoSQL data using HTTP web services. **[6 marks]**

10) Allow user to edit/update the SQL or NoSQL data using HTTP web services.

[6 marks]

11) Provide SQL scripts: DDL script to create your database, tables, constraints and relationship, and DML script to insert, update or delete the data **[6 marks]**

TASK 4 – APPLICATION DEMO (36 MARKS ARE NORMALISED TO 15)

12) Each group must present their web application in Week 12 to the lecturer and the entire class during class time. Although it is a group presentation, it will be assessed individually using the marking rubric provided in Appendix B. The marking rubric has 36 marks, and it will be normalized to a weight of 15 marks. Record a complete demonstration of your application covering the key learning points and upload it together with ppt slides to Moodle Dropbox. The recording time should be 12 to 15 minutes. Submit your recorded clip with ppt slides, python app, database scripts, designs, and other files to Moodle before the due date.

Appendix A:

INFORMATION TECHNOLOGY PROGRAMME

Team Agreement Date of submission ... .

Students should learn to work effectively in groups…..

All team members **must complete the following form** and submit **one copy to the lecturer** in **one week** time from **assignment distribution** and attach **another copy to the group assignment report.** The names of the group members and the appropriate section must be completed and signed off by **ALL group members** before submission.

In assigning marks, Lecturer will be **guided by the group's choice** of option and any other available evidence.

If there are any **difficulties** in following this procedure, students must come and see Lecturer within one weeks from assignment distribution date.

Names of Group Members

1. Name …… Student ID no. …….
2. Name …… Student ID no. …….
3. Name …… Student ID no. …….
4. Name …… Student ID no. …….

Note: - for both options below, all team members are expected to gain knowledge related to all items in the Group Assignment

Option 1: all group members should receive the same mark, under this option for all students must contribute equally to the submission.

Signed 1. …… 2. …… 3. …… 4. ……

Option 2: all group members agree on the following adjustments; students may have different level of contribution under this option; every student will get a different mark according to his contribution.

Student name	Contribution

For example students may have the following contribution, Q1 (40%), Q2 (30%), Q3 (20%), Q4 (10%)

Signed 1. …… 2. …… 3. …… 4. ……

Appendix B:

Oral Presentation Marking Criteria

Student name	
Student ID	
Topic of Presentation	
Total marks	

Content structure / ideas

	Excellent	**Good**	**Fair**	**Poor**
Focus				
☐ **N/A**	☐ **4 marks**	☐ **3 marks**	☐ **2 marks**	☐ **1 mark**
	Purpose of presentation is clear from the outset. Supporting ideas maintain clear focus on the topic.	Topic of the presentation is clear. Content generally supports the purpose.	Presentation lacks clear direction. Big ideas not specifically identified.	No focus at all. Audience cannot determine purpose of presentation.
Organisation				
☐ **N/A**	☐ **4 marks**	☐ **3 marks**	☐ **2 marks**	☐ **1 mark**
	Student presents information in logical, interesting sequence that audience follows.	Student presents information in logical sequence that audience can follow.	Audience has difficulty following because student jumps around.	Audience cannot understand because there is no sequence of information.

Language and Delivery

	Excellent	**Good**	**Fair**	**Poor**
Eye Contact				
☐ **N/A**	☐ **4 marks**	☐ **3 marks**	☐ **2 marks**	☐ **1 mark**
	Holds attention of entire audience with the use of direct eye contact, seldom looking at notes.	Consistent use of direct eye contact with audience, but often returns to notes.	Displays minimal eye contact with audience, while reading mostly from the notes.	No eye contact with audience; entire presentation is read from notes.
Enthusiasm				
☐ **N/A**	☐ **4 marks**	☐ **3 marks**	☐ **2 marks**	☐ **1 mark**
	Demonstrates a strong, positive feeling about topic during entire presentation.	Mostly shows positive feelings about topic.	Shows some negativity toward topic presented.	Shows no interest in topic presented.
Elocution				
☐ **N/A**	☐ **4 marks**	☐ **3 marks**	☐ **2 marks**	☐ **1 mark**
	Student uses a clear voice so that all audience	Student's voice is clear. Most audience	Student's voice is low. Audience has	Student mumbles, speaks too quietly

	members can hear presentation.	members can hear presentation.	difficulty hearing presentation.	for a majority of audience to hear.

Technical Skills

	Excellent	**Good**	**Fair**	**Poor**
Knowledge				
☐ **N/A**	☐ **4 marks**	☐ **3 marks**	☐ **2 marks**	☐ **1 mark**
	Demonstrate clear knowledge and understanding of the subject.	Show clear knowledge and understanding of most of the subject area.	Show some knowledge and understanding of the subject area.	Show no knowledge and understanding of the subject area.
Research				
☐ **N/A**	☐ **4 marks**	☐ **3 marks**	☐ **2 marks**	☐ **1 mark**
	Evidence of thorough research and preparation.	Evidence of sufficient research and preparation	Evidence of some research and preparation.	Evidence of no research and preparation.
Argument				
☐ **N/A**	☐ **4 marks**	☐ **3 marks**	☐ **2 marks**	☐ **1 mark**
	Opinion set out in a concise and persuasive manner.	Opinion is not set out in a concise and persuasive manner.	Opinion is clearly demonstrated but not persuasive.	Opinion is not demonstrated or highlighted.
Questions				
☐ **N/A**	☐ **4 marks**	☐ **3 marks**	☐ **2 marks**	☐ **1 mark**
	Responded very well to technical questions.	Could answer most technical questions related to the presentation.	Could answer some technical questions related to the presentation.	Could not answer any technical questions related to the presentation.

Appendix C:

Peer Assessment Form

	Student Name	Student ID
Student being assessed		
Assessed by		

Rating	Meaning	Explanation
A	Very good	Performance beyond expectations, extremely good.
B	Good	Did everything as expected.
D	Satisfactory	Generally submitted, with some minor delays.
F	Below Expectations	Met the criteria some of the time but effort was not Consistent.
H	Very Poor	Unsatisfactory, did not meet the criteria.
I	Nil	No contribution in this area.

Area of Performance and criteria	Rating (from above)	Justification for Rating
Participation Attends meetings and contributes constructively to the discussions. Asks useful questions. Contributes a fairly to overall weekly tasks.		
Commitment Works with team effectively to accomplish the team goals. Willingly gives time and effort to ensure that other team members are actively supported.		
Communication Able to resolve conflict and able to make and receive constructive comments. Communicates ideas well to eliminate misunderstanding.		
Performance Completes all assigned tasks on time to the expected standard. Encourages and expresses a cooperative and supportive attitude toward other group members.		
Attitude Maintains contact with other group members, positive and open to learning and listens well to others, shares all client and supervisor discussions with other team members		
General Comments		

Appendix D:

VIVA ASSESSMENT SAMPLE

Each group members will arrange suitable time with the lecturer to conduct the viva assessment via Teams and every session will be recorded for document purposes. The lecturer will ask question one at the time for each member and expects answers.

Questions will be based on the following Assignment 2 learning outcomes:

1. Develop and implement Android applications User Interface (UI) by using Android controls.
2. Develop Android applications that include commonly used mobile application features.
3. Develop Android applications that can access data from remote as well as local data sources.
4. Develop workplace soft skills including working in groups, writing formal reports, carrying out individual research and/or delivering oral presentations

Sample questions are something like this: (each question worth 5 marks)

1. What is the name of your mobile app and identify the business problem that is trying to solve?
2. When you develop a mobile app, state one design diagram you would normally draw and its purpose.
3. When you implement the user-interface of your mobile app, explain any two of the Android controls (view or view-group) you have considered to use.
4. What is the difference between editView and textView controls/widgets of mobile app?
5. Name the two database systems your mobile app implemented. What are their differences?

Group number: _____ Student IDs and Names: _____

SOFT708 ASSIGNMENT 2 (100 Marks) MARKING RUBRIC					
Task 1 - Develop and Implement Android Application User Interface (UI) (31%)					
Deliverable	**10 – Excellent**	**9 – 7: Good**	**6 – 4: Fair**	**3 – 1: Poor**	**0 – Very Poor**
1. Android UI different sizes (10%)	Mobile app runs successfully, and all user interfaces display very well on both the screen size 3.7” and 10.1” or around those two sizes. The display matches 100 % according to the design provided.	Mobile app runs successfully, and most user interfaces display very well on both the screen size 3.7” and 10.1” or around those two sizes. The display matches more than 90 % according to the design provided.	Mobile app may not run successfully, and some of the user interfaces display very well on both the screen size 3.7” and 10.1” or around those two sizes. The display matches more than 70 % according to the design provided.	Mobile app does not run successfully, and most of user interfaces do not display very well on both the screen size 3.7” and 10.1” or around those two sizes. The display matches more than 40 % according to the design provided.	No answer or meaningless answer provided.
2. UI design user-friendly (10%)	Mobile app runs successfully, and the first-time user can easily understand and	Mobile app runs successfully, and the first-time user can understand and navigate the app to	Mobile app may not run successfully, and the first-time user may understand and	Mobile app does not run successfully, and the first-time user cannot easily understand and	No answer or meaningless answer provided.

	navigate the app to complete a business transaction within 10 seconds.	complete a business transaction within 30 seconds.	navigate the app to complete a business transaction within 60 seconds.	navigate the app to complete a business transaction within 120 seconds.	
3. UI design professional (5%)	Mobile app runs successfully and all user interfaces display properly with all widgets are well organized on the activity and fragment layouts. The appearance shows the appropriate use of widgets, colour and fonts. The display matches 100 % according to the design provided.	Mobile app runs successfully and most user interfaces display properly with most widgets are well organized on the activity and fragment layouts. The appearance shows mostly the appropriate use of widgets, colour and fonts. The display matches more than 90 % according to the design provided.	Mobile app may not run successfully and some of the user interfaces display properly with some of widgets are well organized on the activity and fragment layouts. The appearance shows some of the appropriate use of widgets, colour and fonts. The display matches more than 70 % according to the design provided.	Mobile app does not run successfully, and most user interfaces do not display properly with some of widgets are not well organized on the activity and fragment layouts. The appearance shows most of the inappropriate use of widgets, colour and fonts. The display matches more than 40 % according to the design provided.	No answer or meaningless answer provided.

4. Exception Handling (6%)	Mobile app runs successfully, and tests all features to fail and crash the app but unsuccessful. The appropriate code such as try-catch etc, is correctly made in all the required area of the source code.	Mobile app runs successfully and tests most features to fail and crash the app but unsuccessful. The appropriate code such as try-catch etc, is correctly made in most of the required area of the source code.	Mobile app may not run successfully and tests some features to fail and crash the app but unsuccessful. The appropriate code such as try-catch etc, is correctly made in some of the required area of the source code.	Mobile app does not run successfully and tests most features to fail and crash the app but successful. The appropriate code such as try-catch etc, is not correctly made in most of the required area of the source code	No answer or meaningless answer provided.
Task 2 - Android Application Feature and Functional Requirements (16%)					
Deliverable	**10 – Excellent**	**9 – 7: Good**	**6 – 4: Fair**	**3 – 1: Poor**	**0 – Very Poor**
5. Any two: Rich Site Summary (RSS), Google map, GPS, or Social Networks (8%)	Mobile app runs successfully, and the two features operate very well according to their purposes. Significant improvement to the features inherited from	Mobile app runs successfully, and the two features operate well according to their purposes. Significant improvement to the features inherited from Assignment 1	Mobile app may not run successfully, and the two features operate according to their purposes. Significant improvement to the features inherited from Assignment 1	Mobile app does not run successfully, and the two features do not operate well according to their purposes. Significant improvement to the features inherited from Assignment 1	No answer or meaningless answer provided.

	Assignment 1 are clearly shown on all functions.	are clearly shown on most functions.	are clearly shown on some functions.	are unclearly shown on most functions.	
6. Any two: splash page, dial phone number, send email or text, browsing website, play video, or Google Calendar. (8%)	Mobile app runs successfully, and the two features operate very well according to their purposes. Significant improvement to the features inherited from Assignment 1 are clearly shown on all functions.	Mobile app runs successfully, and the two features operate well according to their purposes. Significant improvement to the features inherited from Assignment 1 are clearly shown on most functions.	Mobile app may not run successfully, and the two features operate according to their purposes. Significant improvement to the features inherited from Assignment 1 are clearly shown on some functions.	Mobile app does not run successfully, and the two features do not operate well according to their purposes. Significant improvement to the features inherited from Assignment 1 are unclearly shown on most functions.	No answer or meaningless answer provided.
Task 3 - Database operations (38%)					
Deliverable	**10 – Excellent**	**9 – 7: Good**	**6 – 4: Fair**	**3 – 1: Poor**	**0 – Very Poor**
7. Three-Tier & Database (8%)	Mobile app runs successfully and demonstrates very well the usage of 3-Tier architecture	Mobile app runs successfully and demonstrates well the usage of 3-Tier architecture (user-	Mobile app may not run successfully and demonstrates the usage of 3-Tier architecture (user-	Mobile app does not run successfully and unable to demonstrates well the usage of 3-Tier	No answer or meaningless answer provided.

	(user-interface, business logic, data layers); and SQL and NoSQL database system.
