INFORMATION TECHNOLOGY PROGRAMME
SOFT708 MOBILE APPLICATIONS DEVELOPMENT

Individual Assignment 1: Trimester 1, 2026

Due: 4:00 pm, Friday 13th March 2026

Deliverables: A zip folder including the source code of your Mobile App, design documents, and technical manual in Microsoft Word format.

Where: Moodle

This assignment is worth 30% of the total marks in the course and will cover the following learning outcomes as listed in the Course Outline:

1. Install and configure Android application development environment.
2. Develop and implement Android applications User Interface (UI) by using Android controls.
3. Develop Android applications that include commonly used mobile application features.
5. Develop workplace soft skills including working in groups, writing formal reports, carrying out individual research and/or delivering oral presentations.

General Instructions:

- Include a cover page that includes your name, student ID, course code and title, assignment title
- All sources should be acknowledged in the main body of the assignment and in a reference list at the end of the assignment. You are also required to reference any tools/software/applications used. Refer to the 7th edition of the APA referencing style guide. Examples of how to present references can be found here: https://apastyle.apa.org/style-grammar-guidelines/references/examples.

- Your assignment should be your own work to demonstrate your thinking. Any direct quotes from any source should be placed in "quotation marks".
- Upon submission, your assignment will be checked for copied materials as well as the use of AI (artificial intelligence), with penalties to be applied where appropriate and if not referenced.
- You may resubmit draft versions of your assignment **until the due date**. After the due date, the latest version will be accepted as the final version. Note that similarity reports may take 24 hours to generate.
- Resources to assist with writing skills can be found at https://moodle.ais.ac.nz/course/view.php?id=4#section-4
- Late submissions will be penalised by 5% of the available marks from the marks awarded per working day (24 hours) for up to four days and receive a zero mark after four days. (96 hours).
- Mark Distribution is as follows:

Summary of Marking Criteria

Tasks	Description	Max Marks
1	Defining Scope of Application (L1 & L2)	18
2	Develop and Implement Android Application User Interface (UI) L2	25
3	Android Application Feature and Functional Requirements (L3)	22
4	Application Specific requirements (L3)	13
5	Other application requirements (L2 & L3)	10
6	Technical Manual-Install and configure the Android application development environment (L5)	12
7	Application Demo (L5)	20
	Total Marks	**120**

Marking Rubric for this Assignment provided in Appendix A

Submission Instructions

1- Create a folder as Assignment1YourName, for example, Assignment1John.
2- Place your project (1) the source code of the entire solution (mobile application), design documents, and (2) the technical manual in the above folder, i.e., Assignment1YourName.
3- Create a single .zip file of the above Assignmen1YourName folder, then submit the file via Moodle. The link is 'Assignment 1 Drop Box'.
4- Submit the Application demo recording via Moodle. The link is 'Assignment1 App Demo'.

Scenario: In this assignment, you must develop a stand-alone native Android Mobile Application select one from the following application lists. First-come-first serve approach will be used.

Application lists:

1. ToDo List for a Student at AIS 2. ToDo List for a Lecturer at AIS 3. Borrow Books at AIS Library 4. Place Food Order at AIS Cafeteria 5. Notify students for releasing course results 6. Vote for PM and Party to run NZ Government 7. Point of Sale (POS) for AIS Cafeteria 8. Inventory App for AIS Cafeteria 9. Enrolment at AIS 10. Driving Test in NZ 11. Learning Mathematics for Kids 12. Color Guessing App for Kids	13. Schedule Appointment for a clinic 14. Loan/Mortgage Calculator 15. Money Transfer 16. Shopping Transfer 17. Finding shortest path for driving in Auckland 18. Generate Timetable for AIS Trimester 19. Customer ID Tracking System (scanning) 20. Tour Guide App for tour guide or tourist 21. Photo Gallery for business usage 22. Quiz App for Kotlin Programmers 23. Survey App for Student Evaluation 24. Real client application or any app not in the list

Before start developing the application:

- You need to define the scope of the Android Mobile Application (Task 1), and
- Get approval from the lecturer. Once approved, you can go to Task 2 otherwise, repeat the process of Task 1 (select another application, define the application scope, and get approval from the lecturer).

Note:

1. **Your lecturer is a client for this assignment. You should ask your client for the app requirements and clarification during the development stages.**
2. **Your application must be working and should not generate system/run-time errors; you will score zero for any section that generates a system error.**

TASK 1: DEFINING APPLICATION SCOPE: (18 Marks)

It is vital that you pick your Android Mobile Application carefully. It is much easier and fun to work on an application that is interesting and meaningful to you.

- Identify and select an Application that you would like to develop from the lists provided above.
- Draw an **activity diagram** suitable to show your proposed mobile app, list the **functionalities** you want to provide in the application by creating a simple **sitemap** with a few **user interface designs**.
- Submit your application scope as discussed earlier to your Lecturer for approval.

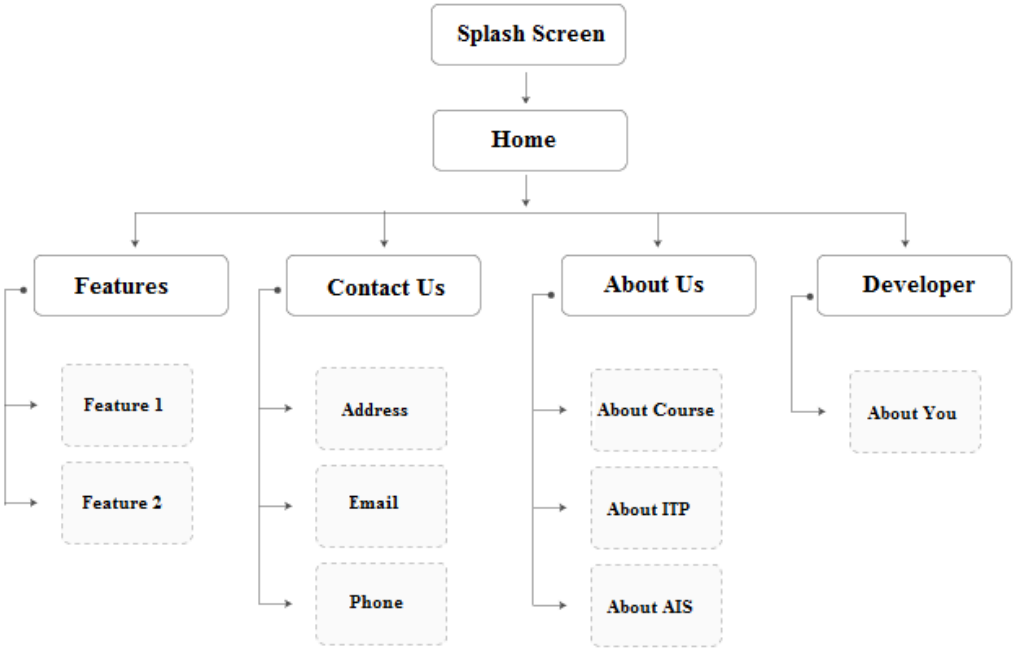

Figure 1: A sample application site map.

Submission

1. Write down the title and introduction of your application. **(2 marks)**

2. Provide a list of functions that will constitute the application scope. Provide a short description of each function. **(2 marks)**

3. Create a site map of your application. A sample of an application site map is illustrated in Figure 1. A sample Application site map and user interfaces. **(2 marks)**

   2. An activity diagram drawn using Visio. **(2 marks)**

4. Install Android studio and apply proper configuration for the development of mobile application required by this assignment. Take appropriate snapshots and label them properly into a Word document. **(10 marks)**

Note:

1. You need to submit this document (application scope) through Moodle within five (5) days after the release of this assignment.
2. After receiving this document, your lecturer will discuss your application idea and the scope of the application with you.
3. In some cases (i.e., your application idea requires ethical approval), your lecturer may ask you to select another application (in this case, you need to repeat task 1),
4. Your lecturer may ask you to add or remove the functionalities to justify the scope of the application.

TASK 2 – DEVELOP AND IMPLEMENT ANDROID APPLICATION USER INTERFACE (UI) (25 Marks)

You will create an Android Application User Interface using a declarative and programmatic approach that will provide the needed functionality for the user to do their work. The Android User Interface includes Android Widgets. You can use the traditional UI development (XML file) or the new UI development technology, JetPack Compose. You can use Java or Kotlin if it works for you.

UI requirements (16 marks)

The exact appearance and functionality of your UI are up to you. The only requirements are documented below.

- Use at least eight (8) appropriate Android widgets, for example, TextView, Button, ImageView, Radio Button, Check Box, Menus, RecyclerView, ScrollView **(2 marks)**
- Use at least eight (8) Android activities or fragments. **(2 marks)**
- Use at least two different layout managers, for example, Constraint Layout, Linear Layout (Horizontal), Linear Layout (Vertical), Frame Layout, and Table Layout, or any from the legacy layouts. **(2 marks)**
- Ensure user-friendly design. A design that is genuinely confusing or hard to use (at the lecturer's discretion) will not receive full credit. **(10 marks)**

Event handling requirements: (9 marks)

- Incorporate at least three different events, e.g. onClick, onLongClick, onFocusChange, onKey, onTouch, onMenuItemClick **(9 marks)**

TASK 3 – ANDROID APPLICATION FEATURE AND FUNCTIONAL REQUIREMENTS (22 MARKS)

Features requirements: (10 marks)

Your application should have the following features: (1) an image gallery and (2) a Google map.

Other functional requirements: (12 marks)

Include the following functionalities: (1) splash page, (2) dial a phone number, (3) send email or text, (4) browsing website.

TASK 4: APPLICATION-SPECIFIC REQUIREMENTS (13 Marks)

This includes specific requirements based on your chosen application. These 13 marks will be distributed to the particular/features of your choosing. For example, if your application is a Mortgage calculator, then 13 marks will be awarded based on:

- Requirements are met
- Navigation
- Efficient use of functions
- Display output in a meaningful manner.

TASK 5: OTHER APPLICATION REQUIREMENTS (10 Marks)

Make sure that:

- You should follow **best practices for application development**: for finding the best practices for application, you may consider:
    - Research similar mobile application
    - Consistency in the user interface design,
    - Application is secure,
    - Thoroughly test your application

You can further search for the best application development practices. A sample article that discusses best application development practices is given below:

Blair, L. (2018, March 28). 17 Top Mobile Development Practices. Retrieved May 15, 2019, from https://buildfire.com/top-mobile-development-practices/

- Your application should follow **the best coding practices**: To find the best coding practices, you may visit various websites, such as those given below, or discuss with your lecturer for guidance.

Guzel, B. (2011, March 30). Top 15 Best Practices for Writing Super Readable Code. Retrieved May 17, 2019, from https://code.tutsplus.com/tutorials/top-15-best-practices-for-writing-super-readable-code--net-8118

Sun Microsystems. (n.d.). Naming Conventions. Retrieved May 17, 2019, from https://www.oracle.com/technetwork/java/codeconventions-135099.html

TASK 6: TECHNICAL MANUAL - INSTALL AND CONFIGURE THE ANDROID APPLICATION DEVELOPMENT ENVIRONMENT (12 Marks)

Prepare a step-by-step technical manual for installing and configuring the development environment for Android applications. This manual must contain the following:

- Prerequisites required.
- Where to get the development kit
- Installation and configuration procedure with necessary screenshots
- Simulator configurations
- Other necessary packages

Technical Manual Formatting requirement

- All the contents are well organized
- Cover page
- Contents
- Headings
- Page numbers
- Font size: 12
- Font family: Times New Roman
- Paragraph align text "Justify
- All snapshots are center-aligned and labeled.

TASK 7: APPLICATION DEMO (20 Marks)

1. **Application demo:** A 15 to 20-minute application demonstration is required in the submission week.

   In the demo, you need to record the demonstration of your application and briefly explain its functionality.

   You may include the following points:

   - Describe your application and application features
   - Justify the scope of the application including source code & designs
   - Demonstrate the features of the application

APPENDIX A

Student ID and Name:

SOFT708 ASSIGNMENT 1 (110 Marks) MARKING RUBRIC					
Task 1 - Application Scope (8%)					
Deliverable	**10 – Excellent**	**9 – 7: Good**	**6 – 4: Fair**	**3 – 1: Poor**	**0 – Very Poor**
1. Application brief overview (2%)	Clear and meaningful name/title is made for the proposed mobile application in a specific business context. A brief comprehensive introduction about the proposed mobile application with its benefits and drawbacks are clearly provided.	Meaningful name/title is made for the proposed mobile application in a specific business context. A brief introduction about the proposed mobile application with its benefits and drawbacks are clearly provided.	Basic name/title is made for the proposed mobile application in a specific business context. A general introduction about the proposed mobile application with its benefits and drawbacks are provided. .	Unclear name/title is made for the proposed mobile application in a specific business context. A general introduction about the proposed mobile application with its benefits and drawbacks are incomplete.	No answer provided or the answer has no clear connection to the mobile app and its business context.
2. Application features (2%)	Clearly identified at least five relevant features of the proposed mobile app with a comprehensive	Clearly identified at least five relevant features of the proposed mobile app	Clearly identified some of at least five general features of the proposed mobile app with a basic	Unclearly identified at least five relevant features of the proposed mobile app with	No answer provided or the answer has no clear connection to the mobile

	description each of them.	with a general description each of them.	description each of them.	incomplete description each of them.	app and its features context.
3. Sitemap Diagram (2%)	The diagram format is professional clearly referenced to valid sources; sitemap shows a hierarchical (tree) structure with meaningful naming convention used; sitemap is very informative!	The diagram format is good clearly referenced to valid sources; sitemap shows a hierarchical (tree) structure with meaningful naming convention used; sitemap is informative!	The diagram format is okay clearly referenced to valid sources; sitemap shows a hierarchical (tree) structure with some meaningful naming convention used; sitemap is less informative!	The diagram format is not good unclearly referenced to valid sources; sitemap shows a hierarchical (tree) structure with less meaningful naming convention used; sitemap is not informative!	No answer provided or the answer has no clear connection to the sitemap and its mobile app context.
4. Activity Diagram (2%)	The diagram format is professional clearly referenced to valid sources; activity diagram shows clearly flows of business activities where the mobile app will involve; diagram is very informative!	The diagram format is good clearly referenced to valid sources; activity diagram shows general flows of business activities where the mobile app will involve; diagram is informative!	The diagram format is okay clearly referenced to valid sources; activity diagram shows clearly some flows of business activities where the mobile app will involve; diagram is less informative!	The diagram format is not good unclearly referenced to valid sources; activity diagram shows unclearly most flows of business activities where the mobile app will involve; diagram is not informative!	No answer provided or the answer has no clear connection to the activity diagram, business and its mobile app context.
5. Install and configure	Clear and informative snapshots for the installation and configuration of	Clear snapshots for the installation and configuration of Android	Basic snapshots for the installation and configuration of	Limited snapshots for the installation and configuration of	No snapshots or meaningless answer provied.

Android Studio (10%)	Android studio saved in a Word document.	studio saved in a Word document.	Android studio saved in a Word document.	Android studio saved in a Word document.	
Task 2 - Develop Application User Interface (25%)					
Deliverable	**10 – Excellent**	**9 – 7: Good**	**6 – 4: Fair**	**3 – 1: Poor**	**0 – Very Poor**
1. Android Widgets (2%)	Correctly usage of at least 8 widgets that are commonly implemented by Android app user interfaces such as TextView, Buttons, ImageView, Radio Buttons, Check Boxes, Menus, RecyclerView, ScrollView etc according to specific designs. The Android app runs successfully to verify all the implemented widgets.	Correctly usage of at least 8 widgets that are commonly implemented by Android app user interfaces such as TextView, Buttons, ImageView, Radio Buttons, Check Boxes, Menus, RecyclerView, ScrollView etc according to specific designs. The Android app runs successfully to verify most of the implemented widgets.	Not correctly usage of at least 8 widgets that are commonly implemented by Android app user interfaces such as TextView, Buttons, ImageView, Radio Buttons, Check Boxes, Menus, RecyclerView, ScrollView etc according to specific designs. The Android app runs successfully to verify some of the implemented widgets.	Not correctly usage of at least 8 widgets that are commonly implemented by Android app user interfaces such as TextView, Buttons, ImageView, Radio Buttons, Check Boxes, Menus, RecyclerView, ScrollView etc according to specific designs. The Android app runs successfully to verify a few of the implemented widgets.	No answer or unusable and meaningless mobile app provided.
2. Android Activity and Fragment (2%)	Correctly Usage of at least 8 activities include at least one fragment that are commonly	Correctly Usage of at least 8 activities include at least one fragment that are commonly implemented by Android app according	Not correctly Usage of at least 8 activities include at least one fragment that are commonly implemented	Not correctly Usage of at least 8 activities include at least one fragment that are commonly implemented	No answer or unusable and meaningless mobile app provided.

	implemented by Android app according to specific designs. The Android app successfully runs to verify all the implemented activities and fragments.	to specific designs. The Android app successfully runs to verify most of the implemented activities and fragments.	by Android app according to specific designs. The Android app successfully runs to verify some of the implemented activities and fragments.	by Android app according to specific designs. The Android app successfully runs to verify a few of the implemented activities and fragments.	
3. Android Layouts (2%)	Correctly Usage of at least 2 different layout managers that are commonly implemented by Android app such as ConstraintLayout, LinearLayout, FrameLayout, TableLayout etc, according to specific designs. The Android app runs successfully to verify all the implemented layout managers.	Correctly Usage of at least 2 different layout managers that are commonly implemented by Android app such as ConstraintLayout, LinearLayout, FrameLayout, TableLayout etc, according to specific designs. The Android app runs successfully to verify most of the implemented layout managers.	Not correctly Usage of at least 2 different layout managers that are commonly implemented by Android app such as ConstraintLayout, LinearLayout, FrameLayout, TableLayout etc, according to specific designs. The Android app runs successfully to verify some of the implemented layout managers.	Not correctly Usage of at least 2 different layout managers that are commonly implemented by Android app such as ConstraintLayout, LinearLayout, FrameLayout, TableLayout etc, according to specific designs. The Android app runs successfully to verify a few of the implemented layout managers.	No answer or unusable and meaningless mobile app provided.

4. User-interfaces Non-functional requirements (10%)	Clear and relevant brief description on why you believe your app user interfaces are user- friendly. The Android app successfully runs to verify all description provided.	Relevant brief description on why you believe your app user interfaces are user- friendly. The Android app successfully runs to verify most of the description provided.	General description on why you believe your app user interfaces are user- friendly. The Android app successfully runs to verify some of the description provided.	Unclear description on why you believe your app user interfaces are user- friendly. The Android app may run and unable to verify most of the description provided.	No answer or unusable and meaningless mobile app provided.
5. Usage of Event Handlers (9%)	Correctly usage of at least 3 different event handler mechanisms that are commonly implemented by Android app such as onClick, onLongClick, onFocusChange, onKey, onTouch, onMenuItemClick, etc. The Android app successfully runs to verify all the implemented handlers.	Correctly usage of at least 3 different event handler mechanisms that are commonly implemented by Android app such as onClick, onLongClick, onFocusChange, onKey, onTouch, onMenuItemClick, etc. The Android app successfully runs to verify most of the implemented handlers.	Incorrectly usage of at least 3 different event handler mechanisms that are commonly implemented by Android app such as onClick, onLongClick, onFocusChange, onKey, onTouch, onMenuItemClick, etc. The Android app successfully runs to verify some of the implemented handlers.	Incorrectly usage of at least 3 different event handler mechanisms that are commonly implemented by Android app such as onClick, onLongClick, onFocusChange, onKey, onTouch, onMenuItemClick, etc. The Android app may run and unable to verify most of the implemented handlers.	No answer or unusable and meaningless mobile app provided.
Task 3 – Application Feature and Functional Requirements (22%)					
Deliverable	**10 – Excellent**	**9 – 7: Good**	**6 – 4: Fair**	**3 – 1: Poor**	**0 – Very Poor**

1. Feature requirements satisfied (10%)	Correctly and professionally implemented of these two additional features: image gallery and google map that are commonly implemented by Android app. The app successfully runs and verified all the implemented features.	Correctly implemented of these two additional features: image gallery and google map that are commonly implemented by Android app. The app successfully runs and verified most of the implemented features.	Incorrectly implemented of these two additional features: image gallery and google map that are commonly implemented by Android app. The app successfully runs and verified some of the implemented features.	Incorrectly implemented of these two additional features: image gallery and google map that are commonly implemented by Android app. The app may run and unable to verify most of the implemented features.	No answer or unusable and meaningless mobile app provided.
2. Other requirements satisfied (12%)	Correctly and professionally implemented of these four additional features: splash page, dial a phone number, send email or text sms, and browse website that are commonly implemented by Android app. The app successfully runs and able to verify all the implemented features.	Correctly implemented of these four additional features: splash page, dial a phone number, send email or text sms, and browse website that are commonly implemented by Android app. The app successfully runs and able to verify most of the implemented features.	Incorrectly implemented of these four additional features: splash page, dial a phone number, send email or text sms, and browse website that are commonly implemented by Android app. The app successfully runs and able to verify some of the implemented features.	Incorrectly implemented of these four additional features: splash page, dial a phone number, send email or text sms, and browse website that are commonly implemented by Android app. The app may run and unable to verify most of the implemented features.	No answer or unusable and meaningless mobile app provided.

Task 4 – Application Specific Requirements (13%)					
Deliverable	**10 – Excellent**	**9 – 7: Good**	**6 – 4: Fair**	**3 – 1: Poor**	**0 – Very Poor**
1. Specific requirements satisfied – meet all requirements (3%)	Mobile app runs successfully and able to satisfy well all requirements specified by Task 1 to 3 of this assignment.	Mobile app runs successfully and able to satisfy well most of the requirements specified by Task 1 to 3 of this assignment.	Mobile app may run successfully and able to satisfy well some of the requirements specified by Task 1 to 3 of this assignment.	Mobile app may run successfully and unable to satisfy most of the requirements specified by Task 1 to 3 of this assignment.	No answer or unusable and meaningless mobile app provided.
2. Specific requirements satisfied – navigation works well (2%)	Mobile app runs successfully and able to satisfy well all navigation requirements specified by Task 1 to 3 of this assignment.	Mobile app runs successfully and able to satisfy well most of navigation requirements specified by Task 1 to 3 of this assignment.	Mobile app may run successfully and able to satisfy well some of navigation requirements specified by Task 1 to 3 of this assignment.	Mobile app may run successfully and unable to satisfy most of navigation requirements specified by Task 1 to 3 of this assignment.	No answer or unusable and meaningless mobile app provided.
3. Specific requirements satisfied – efficient use of functions (5%)	Mobile app runs successfully and able to satisfy well all the non-functional requirements specified by the app efficient usage features.	Mobile app runs successfully and able to satisfy well most of the non-functional requirements specified by the app efficient usage features.	Mobile app may run successfully and able to satisfy well some of the non-functional requirements specified by the app efficient usage features.	Mobile app may run successfully and unable to satisfy well most of the non-functional requirements specified by the app efficient usage features.	No answer or unusable and meaningless mobile app provided.

4. Specific requirements satisfied – display output in meaningful manner (3%)	Mobile app runs successfully and able to satisfy well all the non-functional requirements specified by app output meaningful display.	Mobile app runs successfully and able to satisfy well most of the non-functional requirements specified by app output meaningful display.	Mobile app may run successfully and able to satisfy well some of the non-functional requirements specified by app output meaningful display.	Mobile app may run successfully and unable to satisfy well most of the non-functional requirements specified by app output meaningful display.	No answer or unusable and meaningless mobile app provided.
Task 5 – Other Application Requirements (10%)					
Deliverable	**10 – Excellent**	**9 – 7: Good**	**6 – 4: Fair**	**3 – 1: Poor**	**0 – Very Poor**
1. Best Practices for application development (5%)	Identified clearly the relevant website sources for mobile app development best practices; and briefly and clearly described its usefulness to this assignment project.	Identified the relevant website sources for mobile app development best practices; and briefly described its usefulness to this assignment project.	Identified the website sources for mobile app development best practices; and generally described its usefulness to this assignment project.	Identified the website sources for mobile app development best practices; and unclearly described its usefulness to this assignment project.	No answer or meaningless answer provided.
2. Best Practices for writing code (5%)	Identified clearly the relevant website sources for mobile app programming best practices; and briefly and clearly described	Identified the relevant website sources for mobile app programming best practices; and briefly described its usefulness to this assignment project.	Identified the website sources for mobile app programming best practices; and generally described its usefulness to this assignment project.	Identified the website sources for mobile app programming best practices; and unclearly described its usefulness to this assignment project.	No answer or meaningless answer provided.

	its usefulness to this assignment project.				
Task 6 - Technical Manual (12%)					
Deliverable	**10 – Excellent**	**9 – 7: Good**	**6 – 4: Fair**	**3 – 1: Poor**	**0 – Very Poor**
1. Installation and configuration	Technical manual is well structured looks professional and contains well all the following: • Prerequisites required. • Where to get the development kit • Installation and configuration procedure with necessary screenshots • Simulator configurations • Other necessary packages	Technical manual is well structured looks standard and contains well most of the following: • Prerequisites required. • Where to get the development kit • Installation and configuration procedure with necessary screenshots • Simulator configurations • Other necessary packages	Technical manual is structured looks simply and contains well some of the following: • Prerequisites required. • Where to get the development kit • Installation and configuration procedure with necessary screenshots • Simulator configurations • Other necessary packages	Technical manual is not well-structured looks unprofessional and not contains well the following: • Prerequisites required. • Where to get the development kit • Installation and configuration procedure with necessary screenshots • Simulator configurations • Other necessary packages	No answer or meaningless answer provided.

Task 7 - Application Demo (20 Marks)					
Deliverable	**4 – Excellent**	**3 – Good**	**2 – Fair**	**1 – Poor**	**0 – Very Poor**
1. Focus/Scope	Purpose of demonstration is clear from the outset. Supporting ideas maintain clear focus on the topic.	Topic of the demonstration is clear. Content generally supports the purpose	Topic of demonstration is fairly presented with content partially supports the purpose.	Demonstration lacks clear direction. Big ideas not specifically identified.	No focus at all. Audience cannot determine purpose of demonstration.
2. Organization	Student presents information in logical, interesting sequence that audience follows	Student presents information in logical sequence that audience can follow	Audience has fairly following in a simple sequence that audience can partially follow.	Audience has difficulty following because student jumps around.	Audience cannot understand because there is no sequence of information
3. Time Management	Students start and finish demonstration in time; presented all items.	Students start and finish demonstration in time and could finish in time; presented some parts.	Students could start demonstration in time, but they finish in time,	Students could not star demonstration in time, but they finish in time,	Students could not start and could not finish demonstration in time,
4. Knowledge	Show clear and advanced knowledge and understanding of the OOP concepts, Designs and	Show clear knowledge and understanding of the OOP concepts, Designs and programming languages	Show fair knowledge and understanding of the OOP concepts, Designs and programming languages	Show basic knowledge and understanding of the OOP concepts, Designs and programming languages	Show no knowledge and not understanding of the OOP concepts, Designs and programming languages

	programming languages				
5. Application features	Demonstrate all the application features such as functional and non-functional features with clear examples.	Demonstrate almost all the application features such as functional and non-functional features with clear examples.	Demonstrate fairly most parts of the application features such as functional and non-functional features with examples	Demonstrate some parts of the application features such as functional and non-functional features but unclear examples	Unable to demonstrate the application features such as functional and non-functional features.
