AUCKLAND INSTITUTE OF STUDIES NEW ZEALAND

COURSE OUTLINE

COMP720 INFORMATION TECHNOLOGY PROJECT

PREREQUISITES:
- **COMP701 Information Technology Project Management**
- **Four courses from specialisation**

CO-REQUISITES:
None

RESTRICTIONS:
- **COMP720 Information Technology Project**
- **COMP722 Information Technology Industry Practice**
- **COMP723 Information Technology Internship**

NZQF Level: 7
Credits: 30

LECTURER(S):	Rakesh Kumar
Room:	A118
Phone:	815-1717 ext.# 851
Email:	rakeshk@ais.ac.nz
Contact hour:	As scheduled by supervisors Also outside of this time by appointment

COURSE AIM

The course aims to:
- Bridge the gap between the current academic environment and the expected professional workplace environment.
- To gain industrial experience through IT development work in an industry environment.

LEARNING OUTCOMES

The learners will be able to:

1. Analyse client requirements using current analysis techniques.
2. Identify and relate whenever required appropriate project control techniques in an industry environment.

3. Produce a comprehensive project plan for an industrial IT project; apply the principles of task management, resource management, risk management, project tracking, and project tools in industry environment.
4. Implement the industrial IT project following the appropriate project management framework and System Development Life Cycle
5. Produce all relevant documentation.
6. Develop both IT and workplace soft-skills, including working in groups, writing formal reports, carrying out individual research and/or delivering oral presentations.

COURSE DURATION

The course will be conducted over two fourteen-week trimesters and is mainly intended for BIT students. GDIT students may enrol in this course with the approval of the Academic Head of School. This will normally require a GPA of 5.5 or better over the prior two trimesters. The day, time, and venue for client meetings, supervisor meetings and presentations are to be scheduled and announced weekly.

Supervisor meetings: Students need to arrange meeting time with their supervisor.

LEARNING HOURS

The course will consist of 300 hours of learning: 35 hours of structured in-class learning and 265 hours of associated learning activities such as reading course materials, preparing for class, working in assignments or peer group discussions, and reviewing feedback or materials. An indicative time allocation is shown below.

Activity	**Hours**
Project meetings	20
Reading recommended project materials	30
Preparation for presentations	15
Self-Directed study and project work:	
Project Initiation	5
Project Planning	50
Project Executing	150
Monitoring and Controlling	20
Closing	10
TOTAL	300

COURSE EXPECTATIONS

Studying at this level requires awareness and understanding of academic requirements, which are, at times, difficult to comprehend. Please refer to the AIS Student Handbook for the support systems available. The handbook can be downloaded from www.ais.ac.nz/for-students/student-handbook/

1. Students taking this course are expected to complete all tasks on time and attend all client, supervisor, and common meetings and project presentations. The course is progressive and cumulative in nature, with later tasks expanding on and assuming the completion of previous tasks.

2. Unless with the prior agreement of the project supervisor, all team members are expected to be involved in all or related project activities.
3. In grading, the supervisor will consider their observations throughout the course, the student's journals and reflections on learning, peer assessment forms, and any other relevant evidence. Students must consult with their supervisors or the project coordinator if there are any difficulties in following this procedure.
4. Each student is obligated to maintain a reflective or weekly journal, documenting their thoughts and learning experiences. These journals should be updated and submitted on a weekly basis, serving as a tool for tracking individual progress throughout the course. Additionally, each student is required to write a summary of these journals per trimester and submit it by week 12 of each trimester.
5. To ensure success in this course, it is crucial for the student to establish and maintain professional working relationships with both the client and the supervisor. These relationships are fundamental to achieving success. It's important to keep all involved parties well-informed. Therefore, make sure to include your supervisor and team members in all communications with clients and amongst yourselves.
6. The course will be conducted over 28 weeks. Each supervisor will organize a weekly meeting with their project team and a product/final prototype demo presentation in week 12 of the second trimester. Supervisors will check each student's weekly journal, and the project group meeting minutes to ensure each student is actively participating.
7. The client normally designates a dedicated person (mentor) from their organisation to coordinate with and provide relevant support to the project group during the whole development cycle. Contact either face-to-face, via e-mail, or phone is made on a regular basis to report progress and discuss issues. A record of these contacts should be part of the project documentation.
8. At the end of the trimester, project teams present and demonstrate their systems to their peers and/or to members of the Industry Project Sub-committee and client. Feedback is given during presentation time.
9. All presentations may be recorded and made available for future students for training purposes.
10. All team members must adhere to the dress code, personal grooming, and hygiene expectations. Our dress code for presentations and client meetings is 'smart casual'.
11. To pass the course, students must achieve a minimum of 50% overall, with a minimum of 50% required in the final product/prototype and achieve all the learning outcomes. Student grades will consist of 70% contribution from coursework (project portfolio) and 30% from the final product/prototype.
12. Students must not plagiarise- Plagiarism means presenting the work of another as one's own work. It is an act of dishonesty that violates the obligation of students to act towards each other in good faith, reflects badly on the student's personal integrity, and damages the academic integrity of the entire institution. It may take the form of word-for-word copying or paraphrasing another person's work. It involves presenting the result of such copying for assessment as if it were the student's own work. On some assignments, it is acceptable to quote the work of others as long as the quotation is acknowledged and fully referenced as to its source.

Any students found guilty of plagiarism or other forms of cheating will be referred to the student disciplinary committee and will face possible penalties ranging from zero grades to suspension from AIS.

13. Students are expected to contribute to and actively participate in client meetings, presentations, and all other project activities, drawing on their knowledge and experience of learning and acquisition.

14. Students who withdraw from the course by the end of week 5 will receive the annotation WD (withdrawn) on their academic transcript. Students who withdraw after this time will receive the annotation E (not complete) on their transcript, which is treated as a failing grade.

READINGS AND RESOURCES

Online Learning Management System

The AIS learning management system is Moodle which can be accessed at the following address: http://moodle.ais.ac.nz/

Moodle is one of the ways AIS optimises your learning experience. It is a platform where you can manage your learning. Please take the time to familiarise yourself with each section of Moodle so that you feel comfortable navigating yourself around. Teaching materials and assessments are all normally distributed via Moodle. You should access Moodle before and routinely throughout your course.

Prescribed texts:
There is no prescribed text. Support materials are available online; based on the nature of the project, students may contact their supervisors for further help.

COURSE ASSESSMENT

The assessment for this course will be as follows:

Title	Course Marks %	Learning Outcomes	Due*
Project Portfolio	70%	1, 2, 3, 5, 6	Week 12 of 2nd trimester
Final Product/Prototype	30%	4, 6	Week 12 of 2nd trimester
Total	100%		

* Due dates will vary depending on the project, group members (in case BIT and GDIT students are in one team or only BIT students). Students must check the exact date and time with their supervisors.

Project Team Marking
Following is the process of marking individual students in a project group:

1. All team members in a project group have Assigned Contribution (%) towards a specific component of the project.

2. Achievement Ratio for each team member is calculated using the following formula:

$$\textbf{Achievement Ratio} = \frac{\textbf{\textit{Percentage Achieved}}}{\textbf{\textit{Assigned Contribution}}}$$

3. Mark Weighting for each team member is calculated using the following formula:

$$\textbf{\textit{Mark Weighting}} = \frac{\textbf{Achievement Ratio of a particular team member}}{\textbf{\textit{MAX (Achievement Ratio of all team members)}}}$$

4. Marks for each team member is calculated using the following formula:

$$\textbf{\textit{Marks}} = \textbf{\textit{Mark Weighting}} \times \textbf{\textit{Team Achievement}}$$

5. Repeat Steps 1 to 4 for other components (group work) of the project.

LATE SUBMISSION OF ASSIGNMENTS

The due date(s) are as stated above. Any assignment submitted late – after 4.00pm on the due date for submission, or approved extension date – is subject to a 5% deduction of the available marks from the marks awarded for each successive 24-hour period (or part period) that has elapsed, and will receive a mark of zero if submitted after 96 hours have elapsed. If you have concerns about your ability to meet a deadline, you are advised to consult with your lecturer before the due date.

See the guidelines for your programme in the AIS Student Handbook for more details should you require an assignment extension.

LEARNING SUPPORT

Studying at this level requires awareness and understanding of academic requirements. Several learning support options are available:

1. Attend the Learning Skills Workshops – a monthly timetable will be provided via Moodle and email.
2. Consult with your course lecturer, either in person, via e-mail, or via Moodle.
3. Contact your class representative.
4. Contact the Learning Skills Advisor for individual consultations and help (via Teams or in the Library) – Tamendi Pranish (tamendip@ais.ac.nz)
5. Visit or contact the AIS Library (ais-library@ais.ac.nz)
6. Contact Student Support Services (nadiak@ais.ac.nz)

7. Contact the Head of Department, Dr Wikus Erasmus (wikuse@ais.ac.nz)

Please refer to the AIS Student Handbook for other support services that are available. The handbook can be found on the AIS website (https://www.ais.ac.nz/student-life/student-handbook).

Any copied materials on Moodle are copied under the PTE NZ Copyright Licence. These materials have been copied solely for educational purposes at AIS. Please use the materials for your own learning in this course.

When lessons are recorded, they will be posted on Moodle for your personal use only and are not for redistribution.

It is not acceptable for students to record lessons without the full knowledge of all the people in the classroom. Please ask permission before recording classes. Provided it is reasonable, permission will normally be given.

We recommend that you retain your course outlines for future reference as they are subject to modification.
